AI in weather forecasting? IMD says not quite there yet

Pilot projects show promise but also reveal gaps, especially in predicting how intense storms and rainfall will be

SANJEEB MUKHERJEE
New Delhi, 6 November

The India Meteorological Department (IMD), which is looking to actively integrate artificial intelligence (AI) models into weather forecasting, has launched small pilot programmes but remains cautious about their accuracy across all aspects of forecasting, IMD Director-General Mrunyunjay Mohapatra said.

“PEOPLE ARE STILL EXPERIMENTING WITH AI, AND, MOST IMPORTANTLY, FOR NOW, IT CANNOT REPLACE ALL EXISTING PHYSICAL MODELS”

Mrunyunjay Mohapatra
Director-General, IMD

The Ministry of Earth Sciences, which oversees IMD, has constituted a high-powered panel of experts drawn from IMD, the Indian Institute of Tropical Meteorology in Pune, the National Centre for Medium Range Weather Forecasting, and other agencies to deliberate on the use of AI in forecast modelling.

Internally, IMD has also formed a panel to work on AI-driven forecasting and explore broader applications of AI.

Meanwhile, the department is using AI to develop a Chat-GPT-like communication tool, and the multilingual weather forecasting app Bhashini already employs AI to translate forecasts into regional languages. “Not only that, we have also partnered with a host of private and public research institutions such as Indian Institutes of Technology, Indian Institutes of Management, and other universities to jointly develop AI-based models and applications,” Mohapatra told *Business Standard* recently.

He added that IMD is studying various AI models and exploring ways to adapt those used by European agencies such as

the European Centre for Medium-Range Weather Forecasts (ECMWF). Currently, IMD is using AI for smaller, day-to-day tasks such as calculating heat indices and tracking the paths of tropical cyclones, among other applications.

“But these are very small uses of AI,” Mohapatra admitted. “An all-India, global, or even regional AI-based model for predicting rainfall, temperature, wind speed, or any other parameter — comparable to what we achieve through physical models — has not yet been developed. But it is under development by the ministry.”

He cautioned that AI-based forecasting models are not always completely reliable and sometimes show lower accuracy than physical models.

Mohapatra cited recent tropical cyclone months as an example. He said IMD saw the AI model of ECMWF. However, the track forecast of IMD did not depend upon any individual model. “We are checking the performance of different models. It will take time,” Mohapatra said.

“There are many such examples of AI not performing uniformly well in all aspects. Especially for extreme weather events, our experience shows that AI has not been able to capture their intensity accurately,” he said. “So yes, there are still many issues with AI, though it continues to evolve both in India and globally.”

“If you ask whether it will rain or not at a particular place, AI may perform well,” he said. “But if you ask whether it will rain heavily or not, AI will fail.”

AI in weather forecasting? IMD says not quite there yet

Pilot projects show promise but also reveal gaps, especially in predicting how intense storms and rainfall will be

SANJEEB MUKHERJEE
New Delhi, 6 November

The India Meteorological Department (IMD), which is looking to actively integrate artificial intelligence (AI) models into weather forecasting, has launched small pilot programmes but remains cautious about their accuracy across all aspects of forecasting, IMD Director-General Mrunyunjay Mohapatra said.

PEOPLE ARE STILL EXPERIMENTING WITH AI, AND, MOST IMPORTANTLY, FOR NOW, IT CANNOT REPLACE ALL EXISTING PHYSICAL MODELS

Mrunyunjay Mohapatra
Director-General, IMD

The Ministry of Earth Sciences, which oversees IMD, has constituted a high-powered panel of experts drawn from IMD, the Indian Institute of Tropical Meteorology in Pune, the National Centre for Medium Range Weather Forecasting, and other agencies to deliberate on the use of AI in forecast modelling.

Internally, IMD has also formed a panel to work on AI-driven forecasting and explore broader applications of AI.

Meanwhile, the department is using AI to develop a ChatGPT-like communication tool, and the multilingual weather forecasting app Bhashini already employs AI to translate forecasts into regional languages. "Not only that, we have also partnered with a host of private and public research institutions such as Indian Institutes of Technology, Indian Institutes of Management, and other universities to jointly develop AI-based models and applications," Mohapatra told *Business Standard* recently.

He added that IMD is studying various AI models and exploring ways to adapt those used by European agencies such as

the European Centre for Medium-Range Weather Forecasts (ECMWF). Currently, IMD is using AI for smaller, day-to-day tasks such as calculating heat indices and tracking the paths of tropical cyclones, among other applications.

"But these are very small uses of AI," Mohapatra admitted. "An all-India, global, or even regional AI-based model for predicting rainfall, temperature, wind speed, or any other parameter — comparable to what we achieve through physical models — has not yet been developed. But it is under development by the ministry."

He cautioned that AI-based forecasting models are not always completely reliable and sometimes show lower accuracy than physical models.

Mohapatra cited recent tropical cyclone months as an example. He said IMD saw the AI model of ECMWF. However, the track forecast of IMD did not depend upon any individual model. "We are checking the performance of different models. It will take time," Mohapatra said.

"There are many such examples of AI not performing uniformly well in all aspects. AI in weather forecasting? IMD says not quite there yet

Pilot projects show promise but also reveal gaps, especially in predicting how intense storms and rainfall will be

SANJEEB MUKHERJEE
New Delhi, 6 November

The India Meteorological Department (IMD), which is looking to actively integrate artificial intelligence (AI) models into weather forecasting, has launched small pilot programmes but remains cautious about their accuracy across all aspects of forecasting, IMD Director-General Mrunyunjay Mohapatra said.

“PEOPLE ARE STILL EXPERIMENTING WITH AI, AND, MOST IMPORTANTLY, FOR NOW, IT CANNOT REPLACE ALL EXISTING PHYSICAL MODELS”
Mrunyunjay Mohapatra
Director-General, IMD

He added that there is no firm time frame for when a fully AI-based weather forecasting model will be ready in India, other than the work is ongoing.

According to Mohapatra, this limitation is not unique to India. Globally too—whether in Europe or China—no country or agency has yet fully relied on AI to develop weather forecasting models. “It has not replaced physical models anywhere so far,” he pointed out.

“People are still experimenting with AI, and, most importantly, for now, it cannot replace all existing physical models,” Mohapatra said.

He cautioned that AI-based forecasting models are not always completely reliable and sometimes show lower accuracy than physical models.

Mohapatra cited recent tropical cyclone months as an example. He said IMD saw the AI model of ECMWF. However, the track forecast of IMD did not depend upon any individual model. “We are checking the performance of different models. It will take time,” Mohapatra said.

“There are many such examples of AI not performing uniformly well in all aspects. Especially for extreme weather events, our experience shows that AI has not been able to capture their intensity accurately,” he said. “So yes, there are still many issues with AI, though it continues to evolve both in India and globally.”

“If you ask whether it will rain or not at a particular place, AI may perform well,” he said. “But if you ask whether it will rain heavily or not, AI will fail.”

The Ministry of Earth Sciences, which oversees IMD, has constituted a high-powered panel of experts drawn from IMD, the Indian Institute of Tropical Meteorology in Pune, the National Centre for Medium Range Weather Forecasting, and other agencies to deliberate on the use of AI in forecast modelling.

Internally, IMD has also formed a panel to work on AI-driven forecasting and explore broader applications of AI.

Meanwhile, the department is using AI to develop a Chat-GPT-like communication tool, and the multilingual weather forecasting app Bhashini already employs AI to translate forecasts into regional languages.

“Not only that, we have also partnered with a host of private and public research institutions such as Indian Institutes of Technology, Indian Institutes of Management, and other universities to jointly develop AI-based models and applications,” Mohapatra told *Business Standard* recently.

the European Centre for Medium-Range Weather Forecasts (ECMWF). Currently, IMD is using AI for smaller, day-to-day tasks such as calculating heat indices and tracking the paths of tropical cyclones, among other applications.

“But these are very small uses of AI,” Mohapatra admitted. “An all-India, global, or even regional AI-based model for predicting rainfall, temperature, wind speed, or any other parameter—comparable to what we achieve through physical models—has not yet been developed. But it is under development by the ministry.”

AI in weather forecasting? IMD says not quite there yet

Pilot projects show promise but also reveal gaps, especially in predicting how intense storms and rainfall will be

SANJEEB MUKHERJEE
New Delhi, 6 November

The India Meteorological Department (IMD), which is looking to actively integrate artificial intelligence (AI) models into weather forecasting, has launched small pilot programmes but remains cautious about their accuracy across all aspects of forecasting, IMD Director-General Mrunyunjay Mohapatra said.

“PEOPLE ARE STILL EXPERIMENTING WITH AI, AND, MOST IMPORTANTLY, FOR NOW, IT CANNOT REPLACE ALL EXISTING PHYSICAL MODELS”
Mrunyunjay Mohapatra
Director-General, IMD

The Ministry of Earth Sciences, which oversees IMD, has constituted a high-powered panel of experts drawn from IMD, the Indian Institute of Tropical Meteorology in Pune, the National Centre for Medium Range Weather Forecasting, and other agencies to deliberate on the use of AI in forecast modelling.

Internally, IMD has also formed a panel to work on AI-driven forecasting and explore broader applications of AI.

Meanwhile, the department is using AI to develop a ChatGPT-like communication tool, and the multilingual weather forecasting app Bhashini already employs AI to translate forecasts into regional languages.

“Not only that, we have also partnered with a host of private and public research institutions such as Indian Institutes of Technology, Indian Institutes of Management, and other universities to jointly develop AI-based models and applications,” Mohapatra told *Business Standard* recently.

He added that IMD is studying various AI models and exploring ways to adapt those used by European agencies such as

He added that there is no firm time frame for when a fully AI-based weather forecasting model will be ready in India, other than the work is ongoing.

According to Mohapatra, this limitation is not unique to India. Globally too—whether in Europe or China—no country or agency has yet fully relied on AI to develop weather forecasting models. “It has not replaced physical models anywhere so far,” he pointed out.

“People are still experimenting with AI, and, most importantly, for now, it cannot replace all existing physical models,” Mohapatra said.

He cautioned that AI-based forecasting models are not always completely reliable and sometimes show lower accuracy than physical models.

Mohapatra cited recent tropical cyclone months as an example. He said IMD saw the AI model of ECMWF. However, the track forecast of IMD did not depend upon any individual model. “We are checking the performance of different models. It will take time,” Mohapatra said.

“There are many such examples of AI not performing uniformly well in all aspects. Especially for extreme weather events, our experience shows that AI has not been able to capture their intensity accurately,” he said. “So yes, there are still many issues with AI, though it continues to evolve both in India and globally.”

“If you ask whether it will rain or not at a particular place, AI may perform well,” he said. “But if you ask whether it will rain heavily or not, AI will fail.”

the European Centre for Medium-Range Weather Forecasts (ECMWF). Currently, IMD is using AI for smaller, day-to-day tasks such as calculating heat indices and tracking the paths of tropical cyclones, among other applications.

“But these are very small uses of AI,” Mohapatra admitted. “An all-India, global, or even regional AI-based model for predicting rainfall, temperature, wind speed, or any other parameter—comparable to what we achieve through physical models—has not yet been developed. But it is under development by the ministry.”

AI in weather forecasting? IMD says not quite there yet

Pilot projects show promise but also reveal gaps, especially in predicting how intense storms and rainfall will be

SANJEEB MUKHERJEE
 New Delhi, 6 November

The India Meteorological Department (IMD), which is looking to actively integrate artificial intelligence (AI) models into weather forecasting, has launched small pilot programmes but remains cautious about their accuracy across all aspects of forecasting, IMD Director-General Mrunyunjay Mohapatra said.

PEOPLE ARE STILL EXPERIMENTING WITH AI, AND, MOST IMPORTANTLY, FOR NOW, IT CANNOT REPLACE ALL EXISTING PHYSICAL MODELS

The Ministry of Earth Sciences, which oversees IMD, has constituted a high-powered panel of experts drawn from IMD, the Indian Institute of Tropical Meteorology in Pune, the National Centre for Medium Range Weather Forecasting, and other agencies to deliberate on the use of AI in forecast modelling.

Internally, IMD has also formed a panel to work on AI-driven forecasting and explore broader applications of AI. Meanwhile, the department is using AI to develop a ChatGPT-like communication tool, and the multilingual weather forecasting app Bhashini already employs AI to translate forecasts into regional languages.

"Not only that, we have also partnered with a host of private and public research institutions such as Indian Institutes of Technology, Indian Institutes of Management, and other universities to jointly develop AI-based models and applications," Mohapatra told *Business Standard* recently.

He added that IMD is studying various AI models and exploring ways to adapt those used by European agencies such as the European Centre for Medium-Range Weather Forecasts (ECMWF). Currently, IMD is using AI for smaller, day-to-day tasks such as calculating heat indices and tracking the paths of tropical cyclones, among other applications.

"But these are very small uses of AI," Mohapatra admitted. "An all-India, global, or even regional AI-based model for predicting rainfall, temperature, wind speed, or any other parameter — comparable to what we achieve through physical models — has not yet been developed. But it is under development by the ministry."

He added that there is no firm time frame for when a fully AI-based weather forecasting model will be ready in India, only that the work is ongoing.

According to Mohapatra, this limitation is not unique to India. Globally too — whether in Europe or China — no country or agency has yet fully relied on AI to develop weather forecasting models. "It has not replaced physical models anywhere so far," he pointed out.

"People are still experimenting with AI, and, most importantly, for now, it cannot replace all existing physical models," Mohapatra said.

He cautioned that AI-based forecasting models are not always completely reliable and sometimes show lower accuracy than physical models.

Mohapatra cited recent tropical cyclone months as an example. He said IMD saw the AI model of ECMWF. However, the track forecast of IMD did not depend upon any individual model. "We are checking the performance of different models. It will take time," Mohapatra said.

"There are many such examples of AI not performing uniformly well in all aspects. Especially for extreme weather events, our experience shows that AI has not been able to capture their intensity accurately," he said. "So yes, there are still many issues with AI, though it continues to evolve both in India and globally."

"If you ask whether it will rain or not at a particular place, AI may perform well," he said. "But if you ask whether it will rain heavily or not, AI will fail."

AI in weather forecasting? IMD says not quite there yet

Pilot projects show promise but also reveal gaps, especially in predicting how intense storms and rainfall will be

SANJEEB MUKHERJEE
New Delhi, 6 November

The India Meteorological Department (IMD), which is looking to actively integrate artificial intelligence (AI) models into weather forecasting, has launched small pilot programmes but remains cautious about their accuracy across all aspects of forecasting, IMD Director-General Mrunyunjay Mohapatra said.

PEOPLE ARE STILL EXPERIMENTING WITH AI, AND, MOST IMPORTANTLY, FOR NOW, IT CANNOT REPLACE ALL EXISTING PHYSICAL MODELS

Mrunyunjay Mohapatra
Director-General, IMD

He added that there is no firm time frame for when a fully AI-based weather forecasting model will be ready in India, other than the work is ongoing.

According to Mohapatra, this limitation is not unique to India. Globally too—whether in Europe or China—no country or agency has yet fully relied on AI to develop weather forecasting models. "It has not replaced physical models anywhere so far," he pointed out.

"People are still experimenting with AI, and, most importantly, for now, it cannot replace all existing physical models," Mohapatra said.

He cautioned that AI-based forecasting models are not always completely reliable and sometimes show lower accuracy than physical models.

Mohapatra cited recent tropical cyclone months as an example. He said IMD saw the AI model of ECMWF. However, the track forecast of IMD did not depend upon any individual model. "We are checking the performance of different models. It will take time," Mohapatra said.

"There are many such examples of AI not performing uniformly well in all aspects. Especially for extreme weather events, our experience shows that AI has not been able to capture their intensity accurately," he said. "So yes, there are still many issues with AI, though it continues to evolve both in India and globally."

The European Centre for Medium-Range Weather Forecasts (ECMWF). Currently, IMD is using AI for smaller, day-to-day tasks such as calculating heat indices and tracking the paths of tropical cyclones, among other applications.

"But these are very small uses of AI," Mohapatra admitted. "An all-India, global, or even regional AI-based model for predicting rainfall, temperature, wind speed, or any other parameter—comparable to what we achieve through physical models—has not yet been developed. But it is under development by the ministry."

Internally, IMD has also formed a panel to work on AI-driven forecasting and explore broader applications of AI.

Meanwhile, the department is using AI to develop a ChatGPT-like communication tool, and the multilingual weather forecasting app Bhashini already employs AI to translate forecasts into regional languages.

"Not only that, we have also partnered with a host of private and public research institutions such as Indian Institutes of Technology, Indian Institutes of Management, and other universities to jointly develop AI-based models and applications," Mohapatra told *Business Standard* recently.

He added that IMD is studying various AI models and exploring ways to adapt those used by European agencies such as

AI in weather forecasting? IMD says not quite there yet

Pilot projects show promise but also reveal gaps, especially in predicting how intense storms and rainfall will be

SANJEEB MUKHERJEE
New Delhi, 6 November

The India Meteorological Department (IMD), which is looking to actively integrate artificial intelligence (AI) models into weather forecasting, has launched small pilot programmes but remains cautious about their accuracy across all aspects of forecasting, IMD Director-General Mrunyunjay Mohapatra said.

“PEOPLE ARE STILL EXPERIMENTING WITH AI, AND, MOST IMPORTANTLY, FOR NOW, IT CANNOT REPLACE ALL EXISTING PHYSICAL MODELS”

Mrunyunjay Mohapatra
Director-General, IMD

The Ministry of Earth Sciences, which oversees IMD, has constituted a high-powered panel of experts drawn from IMD, the Indian Institute of Tropical Meteorology in Pune, the National Centre for Medium Range Weather Forecasting, and other agencies to deliberate on the use of AI in forecast modelling.

Internally, IMD has also formed a panel to work on AI-driven forecasting and explore broader applications of AI.

Meanwhile, the department is using AI to develop a Chat-GPT-like communication tool, and the multilingual weather forecasting app Bhashini already employs AI to translate forecasts into regional languages.

“Not only that, we have also partnered with a host of private and public research institutions such as Indian Institutes of Technology, Indian Institutes of Management, and other universities to jointly develop AI-based models and applications,” Mohapatra told *Business Standard* recently.

He added that there is no firm time frame for when a fully AI-based weather forecasting model will be ready in India, other than the work is ongoing.

According to Mohapatra, this limitation is not unique to India. Globally too—whether in Europe or China—no country or agency has yet fully relied on AI to develop weather forecasting models. “It has not replaced physical models anywhere so far,” he pointed out.

“People are still experimenting with AI, and, most importantly, for now, it cannot replace all existing physical models,” Mohapatra said.

He cautioned that AI-based forecasting models are not always completely reliable and sometimes show lower accuracy than physical models.

Mohapatra cited recent tropical cyclone months as an example. He said IMD saw the AI model of ECMWF. However, the track forecast of IMD did not depend upon any individual model. “We are checking the performance of different models. It will take time,” Mohapatra said.

“There are many such examples of AI not performing uniformly well in all aspects. Especially for extreme weather events, our experience shows that AI has not been able to capture their intensity accurately,” he said. “So yes, there are still many issues with AI, though it continues to evolve both in India and globally.”

“If you ask whether it will rain or not at a particular place, AI may perform well,” he said. “But if you ask whether it will rain heavily or not, AI will fail.”

“But these are very small uses of AI,” Mohapatra admitted. “An all-India, global, or even regional AI-based model for predicting rainfall, temperature, wind speed, or any other parameter—comparable to what we achieve through physical models—has not yet been developed. But it is under development by the ministry.”

AI in weather forecasting? IMD says not quite there yet

Pilot projects show promise but also reveal gaps, especially in predicting how intense storms and rainfall will be

SANJEEB MUKHERJEE
New Delhi, 6 November

The India Meteorological Department (IMD), which is looking to actively integrate artificial intelligence (AI) models into weather forecasting, has launched small pilot programmes but remains cautious about their accuracy across all aspects of forecasting, IMD Director-General Mrunyunjay Mohapatra said.

“PEOPLE ARE STILL EXPERIMENTING WITH AI, AND, MOST IMPORTANTLY, FOR NOW, IT CANNOT REPLACE ALL EXISTING PHYSICAL MODELS”
Mrunyunjay Mohapatra
Director-General, IMD

The Ministry of Earth Sciences, which oversees IMD, has constituted a high-powered panel of experts drawn from IMD, the Indian Institute of Tropical Meteorology in Pune, the National Centre for Medium Range Weather Forecasting, and other agencies to deliberate on the use of AI in forecast modelling.

Internally, IMD has also formed a panel to work on AI-driven forecasting and explore broader applications of AI. Meanwhile, the department is using AI to develop a ChatGPT-like communication tool, and the multilingual weather forecasting app Bhashini already employs AI to translate forecasts into regional languages. “Not only that, we have also partnered with a host of private and public research institutions such as Indian Institutes of Technology, Indian Institutes of Management, and other universities to jointly develop AI-based models and applications,” Mohapatra told *Business Standard* recently.

He added that there is no firm time frame for when a fully AI-based weather forecasting model will be ready in India, other than the work is ongoing.

According to Mohapatra, this limitation is not unique to India. Globally too—whether in Europe or China—no country or agency has yet fully relied on AI to develop weather forecasting models. “It has not replaced physical models anywhere so far,” he pointed out. “People are still experimenting with AI, and, most importantly, for now, it cannot replace all existing physical models,” Mohapatra said.

He cautioned that AI-based forecasting models are not always completely reliable and sometimes show lower accuracy than physical models.

Mohapatra cited recent tropical cyclone months as an example. He said IMD saw the AI model of ECMWF. However, the track forecast of IMD did not depend upon any individual model. “We are checking the performance of different models. It will take time,” Mohapatra said. “There are many such examples of AI not performing uniformly well in all aspects. Especially for extreme weather events, our experience shows that AI has not been able to capture their intensity accurately,” he said. “So yes, there are still many issues with AI, though it continues to evolve both in India and globally.” “If you ask whether it will rain or not at a particular place, AI may perform well,” he said. “But if you ask whether it will rain heavily or not, AI will fail.”

AI in weather forecasting? IMD says not quite there yet

Pilot projects show promise but also reveal gaps, especially in predicting how intense storms and rainfall will be

SANJEEB MUKHERJEE
New Delhi, 6 November

The India Meteorological Department (IMD), which is looking to actively integrate artificial intelligence (AI) models into weather forecasting, has launched small pilot programmes but remains cautious about their accuracy across all aspects of forecasting, IMD Director-General Mrunyunjay Mohapatra said.

“PEOPLE ARE STILL EXPERIMENTING WITH AI, AND, MOST IMPORTANTLY, FOR NOW, IT CANNOT REPLACE ALL EXISTING PHYSICAL MODELS”

Mrunyunjay Mohapatra
Director-General, IMD

The Ministry of Earth Sciences, which oversees IMD, has constituted a high-powered panel of experts drawn from IMD, the Indian Institute of Tropical Meteorology in Pune, the National Centre for Medium Range Weather Forecasting, and other agencies to deliberate on the use of AI in forecast modelling.

Internally, IMD has also formed a panel to work on AI-driven forecasting and explore broader applications of AI.

Meanwhile, the department is using AI to develop a ChatGPT-like communication tool, and the multilingual weather forecasting app Bhashini already employs AI to translate forecasts into regional languages.

“Not only that, we have also partnered with a host of private and public research institutions such as Indian Institutes of Technology, Indian Institutes of Management, and other universities to jointly develop AI-based models and applications,” Mohapatra told *Business Standard* recently.

He added that IMD is studying various AI models and exploring ways to adapt those used by European agencies such as the European Centre for Medium-Range Weather Forecasts (ECMWF). Currently, IMD is using AI for smaller, day-to-day tasks such as calculating heat indices and tracking the paths of tropical cyclones, among other applications.

He added that there is no firm time frame for when a fully AI-based weather forecasting model will be ready in India, other than the work is ongoing.

According to Mohapatra, this limitation is not unique to India. Globally too—whether in Europe or China—no country or agency has yet fully relied on AI to develop weather forecasting models. “It has not replaced physical models anywhere so far,” he pointed out.

“People are still experimenting with AI, and, most importantly, for now, it cannot replace all existing physical models,” Mohapatra said.

He cautioned that AI-based forecasting models are not always completely reliable and sometimes show lower accuracy than physical models.

Mohapatra cited recent tropical cyclone months as an example. He said IMD saw the AI model of ECMWF. However, the track forecast of IMD did not depend upon any individual model. “We are checking the performance of different models. It will take time,” Mohapatra said.

“There are many such examples of AI not performing uniformly well in all aspects. Especially for extreme weather events, our experience shows that AI has not been able to capture their intensity accurately,” he said. “So yes, there are still many issues with AI, though it continues to evolve both in India and globally.”

“If you ask whether it will rain or not at a particular place, AI may perform well,” he said. “But if you ask whether it will rain heavily or not, AI will fail.”

AI in weather forecasting? IMD says not quite there yet

Pilot projects show promise but also reveal gaps, especially in predicting how intense storms and rainfall will be

SANJEEB MUKHERJEE
New Delhi, 6 November

The India Meteorological Department (IMD), which is looking to actively integrate artificial intelligence (AI) models into weather forecasting, has launched small pilot programmes but remains cautious about their accuracy across all aspects of forecasting, IMD Director-General Mrunyunjay Mohapatra said.

“PEOPLE ARE STILL EXPERIMENTING WITH AI, AND, MOST IMPORTANTLY, FOR NOW, IT CANNOT REPLACE ALL EXISTING PHYSICAL MODELS”

Mrunyunjay Mohapatra
Director-General, IMD

The Ministry of Earth Sciences, which oversees IMD, has constituted a high-powered panel of experts drawn from IMD, the Indian Institute of Tropical Meteorology in Pune, the National Centre for Medium Range Weather Forecasting, and other agencies to deliberate on the use of AI in forecast modelling.

Internally, IMD has also formed a panel to work on AI-driven forecasting and explore broader applications of AI.

Meanwhile, the department is using AI to develop a ChatGPT-like communication tool, and the multilingual weather forecasting app Bhashini already employs AI to translate forecasts into regional languages.

“Not only that, we have also partnered with a host of private and public research institutions such as Indian Institutes of Technology, Indian Institutes of Management, and other universities to jointly develop AI-based models and applications,” Mohapatra told *Business Standard* recently.

He added that IMD is studying various AI models and exploring ways to adapt those used by European agencies such as the European Centre for Medium-Range Weather Forecasts (ECMWF). Currently, IMD is using AI for smaller, day-to-day tasks such as calculating heat indices and tracking the paths of tropical cyclones, among other applications.

He added that there is no firm time frame for when a fully AI-based weather forecasting model will be ready in India, other than the work is ongoing.

According to Mohapatra, this limitation is not unique to India. Globally too—whether in Europe or China—no country or agency has yet fully relied on AI to develop weather forecasting models. “It has not replaced physical models anywhere so far,” he pointed out.

“People are still experimenting with AI, and, most importantly, for now, it cannot replace all existing physical models,” Mohapatra said.

He cautioned that AI-based forecasting models are not always completely reliable and sometimes show lower accuracy than physical models.

Mohapatra cited recent tropical cyclone months as an example. He said IMD saw the AI model of ECMWF. However, the track forecast of IMD did not depend upon any individual model. “We are checking the performance of different models. It will take time,” Mohapatra said.

“There are many such examples of AI not performing uniformly well in all aspects. Especially for extreme weather events, our experience shows that AI has not been able to capture their intensity accurately,” he said. “So yes, there are still many issues with AI, though it continues to evolve both in India and globally.”

“If you ask whether it will rain or not at a particular place, AI may perform well,” he said. “But if you ask whether it will rain heavily or not, AI will fail.”

Ray-Ban Meta glasses to be sold on Amazon, Flipkart

Meta has announced that its Ray-Ban Meta Gen 1 smart glasses will soon be available in India through Amazon, Flipkart, and Reliance Digital, starting November 21. Priced from ₹29,900, the glasses are already available for purchase via the official Ray-Ban website.

Google Pixel Watch 4 goes on sale

Google's Pixel Watch 4 is now available for purchase in India. Launched alongside the Pixel 10 series, the smartwatch is priced at ₹39,900 onwards and comes in 41mm and 45mm dial options. Buyers will also receive a six-month Fitbit Premium subscription at no additional cost.

CONCORD CONTROL SYSTEMS LIMITED

Enhancing Indian Railways' efficiency & connectivity with innovative solutions.

Concord Control Systems Ltd: Driving Growth in Railway Technology

Concord Control Systems Ltd is a manufacturing and supply of Coach related and Electrification products for Indian Railways and other Railway Contractors. It has transformed into a deep research backed railway solutions and technology player who understands on ground railway problems, earning widespread recognition for its reliability, safety, and superior quality across the nation's rail network. Concord plays a pivotal role in supporting Indian Railways' modernization efforts and infrastructure enhancements. The company works closely with important organisations like RDSO, CLW, and ICF to bring in modern technology and smart systems. It is into KAVACH business through Progota India Private Limited and High Value Flex PCB Segment through Fusion Electronics Private Limited.

AI in weather forecasting? IMD says not quite there yet

Pilot projects show promise but also reveal gaps, especially in predicting how intense storms and rainfall will be

SANJEEB MUKHERJEE
New Delhi, 6 November

The India Meteorological Department (IMD), which is looking to actively integrate artificial intelligence (AI) models into weather forecasting, has launched small pilot programmes but remains cautious about their accuracy across all aspects of forecasting, IMD Director-General Mrunyunjay Mohapatra said.

“PEOPLE ARE STILL EXPERIMENTING WITH AI, AND, MOST IMPORTANTLY, FOR NOW, IT CANNOT REPLACE ALL EXISTING PHYSICAL MODELS”

Mrunyunjay Mohapatra
Director-General, IMD

The Ministry of Earth Sciences, which oversees IMD, has constituted a high-powered panel of experts drawn from IMD, the Indian Institute of Tropical Meteorology in Pune, the National Centre for Medium Range Weather Forecasting, and other agencies to deliberate on the use of AI in forecast modelling.

Internally, IMD has also formed a panel to work on AI-driven forecasting and explore broader applications of AI.

Meanwhile, the department is using AI to develop a ChatGPT-like communication tool, and the multilingual weather forecasting app Bhashini already employs AI to translate forecasts into regional languages. “Not only that, we have also partnered with a host of private and public research institutions such as Indian Institutes of Technology, Indian Institutes of Management, and other universities to jointly develop AI-based models and applications,” Mohapatra told *Business Standard* recently.

He added that IMD is studying various AI models and exploring ways to adapt those used by European agencies such as

the European Centre for Medium-Range Weather Forecasts (ECMWF). Currently, IMD is using AI for smaller, day-to-day tasks such as calculating heat indices and tracking the paths of tropical cyclones, among other applications.

“But these are very small uses of AI,” Mohapatra admitted. “An all-India, global, or even regional AI-based model for predicting rainfall, temperature, wind speed, or any other parameter — comparable to what we achieve through physical models — has not yet been developed. But it is under development by the ministry.”

He added that there is no firm time frame for when a fully AI-based weather forecasting model will be ready in India, only that the work is ongoing.

According to Mohapatra, this limitation is not unique to India. Globally too — whether in Europe or China — no country or agency has yet fully relied on AI to develop weather forecasting models. “It has not replaced physical models anywhere so far,” he pointed out.

“People are still experimenting with AI, and, most importantly, for now, it cannot replace all existing physical models,” Mohapatra said.

He cautioned that AI-based forecasting models are not always completely reliable and sometimes show lower accuracy than physical models.

Mohapatra cited recent tropical cyclone months as an example. He said IMD saw the AI model of ECMWF. However, the track forecast of IMD did not depend upon any individual model. “We are checking the performance of different models. It will take time,” Mohapatra said.

“There are many such examples of AI not performing uniformly well in all aspects. Especially for extreme weather events, our experience shows that AI has not been able to capture their intensity accurately,” he said. “So yes, there are still many issues with AI, though it continues to evolve both in India and globally.” “If you ask whether it will rain or not at a particular place, AI may perform well,” he said. “But if you ask whether it will rain heavily or not, AI will fail.”

AI in weather forecasting? IMD says not quite there yet

Pilot projects show promise but also reveal gaps, especially in predicting how intense storms and rainfall will be

SANJEEB MUKHERJEE
New Delhi, 6 November

The India Meteorological Department (IMD), which is looking to actively integrate artificial intelligence (AI) models into weather forecasting, has launched small pilot programmes but remains cautious about their accuracy across all aspects of forecasting, IMD Director-General Mrunyunjay Mohapatra said.

PEOPLE ARE STILL EXPERIMENTING WITH AI, AND, MOST IMPORTANTLY, FOR NOW, IT CANNOT REPLACE ALL EXISTING PHYSICAL MODELS

Mrunyunjay Mohapatra
Director-General, IMD

The Ministry of Earth Sciences, which oversees IMD, has constituted a high-powered panel of experts drawn from IMD, the Indian Institute of Tropical Meteorology in Pune, the National Centre for Medium Range Weather Forecasting, and other agencies to deliberate on the use of AI in forecast modelling.

Internally, IMD has also formed a panel to work on AI-driven forecasting and explore broader applications of AI.

Meanwhile, the department is using AI to develop a Chat-GPT-like communication tool, and the multilingual weather forecasting app Bhashini already employs AI to translate forecasts into regional languages.

"Not only that, we have also partnered with a host of private and public research institutions such as Indian Institutes of Technology, Indian Institutes of Management, and other universities to jointly develop AI-based models and applications," Mohapatra told *Business Standard* recently.

He added that IMD is studying various AI models and exploring ways to adapt those used by European agencies such as

the European Centre for Medium-Range Weather Forecasts (ECMWF). Currently, IMD is using AI for smaller, day-to-day tasks such as calculating heat indices and tracking the paths of tropical cyclones, among other applications.

"But these are very small uses of AI," Mohapatra admitted. "An all-India, global, or even regional AI-based model for predicting rainfall, temperature, wind speed, or any other parameter — comparable to what we achieve through physical models — has not yet been developed. But it is under development by the ministry."

He added that there is no firm time frame for when a fully AI-based weather forecasting model will be ready in India, other than the work is ongoing.

According to Mohapatra, this limitation is not unique to India. Globally too — whether in Europe or China — no country or agency has yet fully relied on AI to develop weather forecasting models. "It has not replaced physical models anywhere so far," he pointed out.

"People are still experimenting with AI, and, most importantly, for now, it cannot replace all existing physical models," Mohapatra said.

He cautioned that AI-based forecasting models are not always completely reliable and sometimes show lower accuracy than physical models.

Mohapatra cited recent tropical cyclone months as an example. He said IMD saw the AI model of ECMWF. However, the track forecast of IMD did not depend upon any individual model. "We are checking the performance of different models. It will take time," Mohapatra said.

"There are many such examples of AI not performing uniformly well in all aspects. Especially for extreme weather events, our experience shows that AI has not been able to capture their intensity accurately," he said. "So yes, there are still many issues with AI, though it continues to evolve both in India and globally."

"If you ask whether it will rain or not at a particular place, AI may perform well," he said. "But if you ask whether it will rain heavily or not, AI will fail."
